

Real Solutions for Lowering Gas Prices at the Pump

“Americans are right to demand Congress act now to lower gas and diesel prices. That means getting serious about producing more American-made energy by tapping into our oil and gas reserves, and also expanding other energy sources like nuclear, wind and solar.” – Congressman Hastings

Congressman Hastings supports a complete solution that includes:

- Tapping our nation’s abundant oil and gas reserves by drilling in Alaska, off our coasts, and on federal lands.
- Investing in more nuclear and hydropower
- Expanding wind, solar and other new energy sources
- Making it easier to build and license new refineries in America

Congressman Hastings is a cosponsor and supporter of the energy bills listed below. Those who control Congress refuse to allow a vote on any of these bills – or on any proposal that would produce more American-made energy and lower prices.

- H.R. 6107 Opens the Alaskan Coastal Plain to oil and gas exploration and provides funding for development of hydropower, wind and solar and other renewable energy sources.
- H.R. 2784 Allows natural gas production off our coasts.
- H.R. 2279 Expedites construction and licensing of new refineries in America.
- H.R. 3089 Helps open new American refineries, extends the wind production tax credit, and adds tax incentives for new nuclear power plants.
- H.R. 2208 Encourages use of clean coal-to-liquid technology.
- H.R. 2493 Removes fuel blend mandates that increase the price of gas.
